## Discontinuation of Parabus Roof Hatch Control system (RHC)

Dear Customer,

With developing technology the availability of some analogue parts has become most limited. Even some substitute analogue parts have recently become hard to find on the market. Thus, it has been decided to discontinue the existing analogue remote Roof Hatch Control system, RHC as of June 2012. After that all RHC parts will be available only as spare parts and provided that subparts will be disposable on the market.

Instead we'd like to introduce the DHC control system (Digital Hatch Control), meeting the demands of today in terms of technology and user friendliness. The DHC system replaces the RHC system (except the passenger switch RHC30), offers more to a less expensive price, and is compatible for all current and future Parabus electrical roof hatches.
